GREEN ANTI-CAPITALIST FRONT

1. Capitalism is Boring AF and ALL politicians are ugly.
2. Climate change = capitalism at war with our class and our planet.
3. Together, we have the power to bring it down and create a really nice alternative without compromising with politicians and cops.
4. We want a world that is based upon the sustainable needs of people - not consumer-madness and dirty profits/luxury for a few.
5. If the planet is gonna burn because of greed and exploitation, then let's have some fun with the mofos that did it.

What is the Green Anti-Capitalist Front?

The *Green Anti-Capitalist Front* is a banner for all those who recognise the capitalist roots of environmental and ecological catastrophe and who realise that compromising with those whose interests (the capitalist class, the state, the police) are completely opposed to our own is not an option.

We bring together anticapitalists of all stripes, be they anarchist, communist, socialist or those who simply know that capitalism must be smashed. As a diverse group we take diverse actions, from challenging capitalist narratives to organising workers, from taking part in demonstrations to sabotaging fracking facilities.

Together we can build a movement that doesn't ask for a nicer form of capitalism, but rather one that builds alternatives to the market economy, smashes the destructive structures of capital and rejects the obvious lie that "there is no alternative".

We believe that without the imposed scarcity of capitalism and the alienation and isolation it causes, we would be able to build communities which fulfil everybody's needs while reducing our environmental impact to a manageable level, to be balanced through conscious, sustainable and rational practices of growing food, capturing clean energy and providing shelter, comfort and safety for all.

We would also have time and energy to deal with environmental destruction that capitalism has already caused by pursuing new ideas, techniques and technologies not driven by the profit motive.

The option is clear: a future where we can flourish, or the capitalist-induced hellscape awaiting us if we do nothing!
